^A UCR Code indicates DNA extraction codes & specimen voucher codes (unless the sequences came from another noted source).

^B Vouchers are either primary vouchers (P = the remains of the insect from which DNA was extracted) or secondary vouchers (S = a specimen believed to represent, and selected from the same collection event as the insect from which DNA was extracted).

^C The symbol *** indicates that the 28S-D2 accession number applies to both the D2 and D3 regions.
